Introduction	1
---------------------------	---

Part I The Classical Currency Crisis Models

1 First-Generation Model – Krugman (1979)	9
1.1 The Classical First-Generation Model by Krugman (1979)	10
1.2 Modifications of the First-Generation Model	14
1.2.1 Sterilizing Money-Supply Effects	14
1.2.2 Sterilization and Risk Premia	15
1.2.3 Assuming Uncertainties	16
2 Second-Generation Model – Obstfeld (1994)	19
2.1 The Classical Second-Generation Model by Obstfeld (1994) ...	20
2.2 Empirical Tests	25

Part II Self-Fulfilling Currency Crisis Model with Unique Equilibrium – Morris and Shin (1998)

3 Introduction	29
4 Game-Theoretic Preliminaries	33
4.1 Games, Strategies and Information	33
4.2 Solving Coordination Games	39
4.3 Equilibrium Selection in Global Games – Carlsson and van Damme (1993)	44
4.4 Generalizing the Method to n-Player, 2-Action Games	49

5	Solving Currency Crisis Models in Global Games – The Morris/Shin-Model (1998)	53
5.1	The Basic Model by Morris and Shin (1998)	54
5.2	Interpretation of the Results	60
6	Transparency and Expectation Formation in the Basic Morris/Shin-Model (1998)	63
6.1	Transparency	63
6.2	Expectation Formation	66

Part III The Influence of Private and Public Information in Self-Fulfilling Currency Crisis Models

7	Introduction	73
8	Characterization of Private and Public Information	77
9	The Currency Crisis Model with Private and Public Information	81
9.1	The Structure of the Model	81
9.2	The Complete Information Case - Multiple Equilibria	83
9.3	Incomplete Public Information - Multiple Equilibria versus Unique Equilibrium	84
9.4	Incomplete Public and Private Information - Unique Equilibrium	87
9.4.1	Derivation of the Unique Equilibrium	88
9.4.2	The Uniqueness Condition	93
9.5	Comparative Statics	94
9.6	Unique versus Multiple Equilibria and the Importance of Private and Public Information	106
9.7	Conclusion	107
10	Optimal Information Policy - Endogenizing Information Precision	113
10.1	The Model	115
10.2	Optimal Risk Taking and Information Policy	116
10.3	Conclusion	129

Part IV Informational Aspects of Speculators' Size and Dynamics

11	Introduction	135
-----------	---------------------------	------------

12	Currency Crisis Models with Small and Large Traders	137
12.1	The Basic Model with Small and Large Traders - Corsetti, Dasgupta, Morris and Shin (2001)	139
12.2	Simplified Model	147
12.2.1	The Derivation of Equilibrium	148
12.2.2	Comparative Statics	153
12.3	Conclusion	159
13	Informational Cascades and Herds: Aspects of Dynamics and Time	163
13.1	Herding Behavior and Informational Cascades	164
13.1.1	The Model by Banerjee (1993)	164
13.1.2	The Model by Bikhchandani, Hirshleifer and Welch (1992)	168
13.2	Currency Crises as Dynamic Coordination Games - Dasgupta (2001)	171
13.2.1	The Static Benchmark Case	172
13.2.2	Dynamic Game with Exogenous Order	174
13.2.3	Dynamic Game with Endogenous Order	178
13.3	Large Traders in Dynamic Coordination Games	181

Part V Testing the Theoretical Results

14	Introduction	189
15	Experimental Evidence	193
16	Empirical Evidence	199
16.1	The Asian Crisis 1997-98 - Empirical Tests by Prati and Sbracia (2001)	199
16.2	The Mexican Peso Crisis 1994-95 - Descriptive Evidence	207
16.2.1	The Venue of the Mexican Crisis	207
16.2.2	Combining the Observations with Theoretical Results	213

Part VI Concluding Thoughts
