## Part I Experimental Methods for Investigating Relaxation Phenomena in Condensed Matter

---

<b>1 Dielectric Relaxation Spectroscopy . . . . .</b>	<b>13</b>
1.1 Frequency domain dielectric spectroscopy . . . . .	13
1.1.1 Dielectric spectroscopy of molecular and collective processes . . . . .	13
Complex dielectric permittivity . . . . .	13
Dielectric spectroscopy of liquid crystals . . . . .	14
1.1.2 Macroscopic models of dielectric spectra . . . . .	15
Debye model . . . . .	15
Cole–Cole model . . . . .	20
Havriliak Negami model . . . . .	21
1.1.3 Relaxation function and dielectric spectra . . . . .	22
1.1.4 Dielectric spectrometer . . . . .	23
Apparatus . . . . .	23
Sample and cell preparation . . . . .	23
Vacuum controlled experiment . . . . .	25

1.1.5	A simple model of Maxwell–Wagner relaxation . . . . .	27
	Two layer dielectric . . . . .	27
	SHDR process . . . . .	30
1.1.6	Dielectric spectroscopy of ionic diffusion . . . . .	31
1.1.7	Summary . . . . .	32
References	. . . . .	33
1.2	Dielectric time domain spectroscopy . . . . .	35
1.2.1	Introduction . . . . .	35
1.2.2	Fourier transformation . . . . .	36
1.2.3	Single reflection . . . . .	37
1.2.4	The total transmission method . . . . .	40
1.2.5	The open circuit total reflection method . . . . .	44
1.2.6	Admittance analysis and bilinear calibration . . . . .	46
1.2.7	Conclusion . . . . .	50
References	. . . . .	50
1.3	Nonlinear dielectric spectroscopy . . . . .	51
1.3.1	Introduction . . . . .	51
1.3.2	Theoretical background of the nonlinear dielectric spectroscopy . . . . .	53
1.3.3	Nonlinear dielectric relaxation in non-interacting dipolar systems . . . . .	57
1.3.4	Nonlinear dielectric relaxation due to chemical rate processes in liquids . . . . .	60
1.3.5	Summary . . . . .	70
References	. . . . .	70
1.4	Dielectric relaxation processes in condensed matter under pressure . . . . .	71
1.4.1	Usefulness of high pressure studies and the equation of state . . . . .	71
	1.4.1.1 Establishment of phase diagrams . . . . .	71
	1.4.1.2 $pVT$ measurements . . . . .	73
	1.4.1.3 Entropy separation . . . . .	74
	1.4.1.4 Volume dependence of the clearing line . . . . .	75
	1.4.1.5 Density dependencies of the dielectric relaxation and the order parameter . . . . .	75
1.4.2	Experimental methods . . . . .	75
1.4.3	Dielectric relaxation and activation quantities . . . . .	78
1.4.4	Selected results . . . . .	80
1.4.5	Summary . . . . .	84
References	. . . . .	84
<b>2</b>	<b>Dynamic Susceptibility of Magnetic Systems . . . . .</b>	<b>89</b>

### 3 Relaxation Phenomena in High- $T_c$ Superconductors:

<b>Experimental Methods and Results</b> .....	137
3.1 Introduction .....	137
3.2 Experimental techniques .....	138
3.2.1 Mössbauer spectroscopy .....	138
3.2.1.1 Isomer shift .....	140
3.2.1.2 Quadrupole splitting .....	140
3.2.1.3 Magnetic hyperfine field .....	140
3.2.1.4 Relaxation phenomena .....	141
3.2.2 $\mu^+$ SR spectroscopy .....	142
3.2.3 Neutron techniques .....	144
3.2.3.1 Neutron diffraction .....	145
3.2.3.2 Inelastic neutron scattering .....	145

3.3	Experimental results	146
3.3.1	$\text{La}_{2-x}\text{Sr}_x\text{CuO}_4$ compounds	146
3.3.2	$\text{RBa}_2\text{Cu}_3\text{O}_{6+d}$ compounds (R = rare earth metals and Y)	148
3.3.3	$\text{Y}_{1-x}\text{Ca}_x\text{Ba}_2\text{Cu}_3\text{O}_{6+d}$ compounds	155
3.4	Summary	157
	References	157
