Contents

1	**Concepts of Metrology**	1
1.1	Organisation and Framework	2
1.1.1	Metrology – An Introduction into its History and its Organisation	2
1.1.2	The International Framework in Metrology	7
1.2	Convention and Definitions	9
1.2.1	A Definition of Convention	9
1.2.2	Terms of Metrology: A Measurement is a Comparison	10
1.2.3	Concepts of Metrology	13
1.3	Statistics	23
1.3.1	Statistical Basics	23
1.3.2	Distributions	24
1.3.3	Normal Distribution	24
1.3.4	Central Limit Theorem	27
1.3.5	Cumulative Normal Distribution	28
1.3.6	Empirical Distribution Function (EDF)	29
1.3.7	Comparing EDF and Normal Distribution: Kolmogorov–Smirnov Test	31
1.3.8	Linear Regression	32
1.3.9	Coverage and Confidence Regions	34
1.3.10	Correlation	37
1.3.11	Progression of Error	37
1.4	Metrology in Standard Situations	39
1.4.1	Assessing Measurement Uncertainty	39
1.4.2	Top-down Approach	39
1.4.3	Nordtest Approach	40
1.4.4	Bottom-up Approach: Measurement of pH in a Low-Ionic Strength Water	41
1.5	Metrology in Complex Situations	48
1.5.1	Calibration by Linear Relationships	48
1.5.2	Calibration by Ordinary Linear Regression (OLS)	49
1.5.3	Alternative Methods for Obtaining Straight Line Parameters	53
1.5.4	Application Examples	60
1.5.5	Analysis of Linear Calibration Curves: A Summary	66

1.6	Metrology in Complex Situations: Non-Normality, Correlation and Non-Linearity	68
1.6.1	Resampling Methods – An Introduction	68
1.6.2	Bootstrapping Regression Schemes	73
1.6.3	Bootstrap Confidence Bands and Inference Regions	76
1.7	Metrology in Complex Situations: Examples	79
1.7.1	Importance of Complex Situations in Environmental Sciences and Geochemical Modeling	79
1.7.2	Non-Linearity, Correlation and Non-Normality: A Working Example	81
1.7.3	Cause-and-Effect Approach to Quantities from Complex Situations	84
1.7.4	Random Sampling by Uniform and Normal Deviates	88
1.7.5	Correlation Within the Disturbances and Parameters – The Moving Block Bootstrap (MBB)	90
1.7.6	Predictions in Presence of Measurement Uncertainty: Efficient Sampling from Multidimensional Distributions	97
1.7.7	Deciding when a Limit Value has been Exceeded: Measurement Uncertainty and Law	109
1.7.8	Further Considerations	113
1.8	Deficit Analysis of Existing Thermodynamic Data for Environmental Simulation	114
1.8.1	Uncertainty Contributions from Methodology and Practice	115
1.8.2	Uncertainty Contributions from Ionic Strength Corrections	118
1.8.3	Uncertainty Contributions from pH	124
1.8.4	Uncertainty Contributions from Metal Ion Concentration Determination	128
1.8.5	Uncertainties from Subsequent Manipulation, Selection and Recalculation	130
1.8.6	Overestimation of Measurement Results	133
1.8.7	Summary: The Need for Performance Assessment of Analytical Chemistry Methods	137
2	**Metrology in Chemistry and Geochemical Modeling**	141
2.1	Geochemical Modeling – An Introduction	141
2.1.1	Groundwater Models	144
2.1.2	Discretisation Methods for Space	145
2.1.3	Discretisation Methods for Time	149
2.1.4	Compartment Models	149
2.1.5	Geochemical Models	150
2.2	Handling of Uncertainty in Geochemical Modeling	158
2.2.1	Uncertainty and Sensitivity Analysis	158
2.2.2	A Conceptual Model of Geochemical Modeling Codes	161
2.2.3	Importance of the Thermodynamic "Database"	163

2.2.4	Sensitivity Analysis	165
2.2.5	Uncertainty Analysis	169
2.3	Geochemical Modeling and Decision Making	176
2.3.1	Being Confronted with Geochemical Models and Their Results – Some Guidelines	176
2.3.2	"It's Good! It's Calculated by a Computer!"	177
2.4	Criteria for and Deficits in Chemical Data for Geochemical Modeling	182
2.4.1	Deficit Analysis of Thermodynamic Data	182
2.4.2	Criteria for the Determination and Reporting of Thermodynamic Data	186
2.4.3	Comments	187
2.4.4	Deficit Analysis of Surface Interaction Parameters	188
2.4.5	Example: Surface Complexation	191
2.4.6	Criteria for Determining and Reporting Data for Surface Interaction Parameters	200
3	**Metrological Principles Applied to Geohydraulic Data**	203
3.1	A Brief Summary in Geohydraulics	204
3.1.1	Permeability and Metrology	204
3.1.2	Transfer of Laboratory-Determined Permeability Data to the Aquifer	218
3.1.3	Models for the Three-Dimensional Description of Permeabilities	220
3.2	Measurement of Geohydraulic Parameters in Laboratory and Field	220
3.2.1	Sample Quality and its Influence on Permeability Data	221
3.2.2	Pore Volume Measurement	225
3.2.3	Laboratory Experiments for the Measurement of Permeability	230
3.2.4	Contribution of Geophysical Methods to Permeability Measurements	237
3.2.5	In-Situ Measurement of Permeability and Hydraulic Conductivity	241
3.3	Cause-and-Effect Analysis for Geohydraulic Measurement Values	256
3.3.1	General Approach to Quality Assurance of Permeability Data	256
3.3.2	Cause-and-Effects Analysis	256
3.3.3	Quality Criteria of Permeability Data	259
3.4	Practical Approach to the Application of Metrological Concepts in Geohydrology	265
3.4.1	Parametric Uncertainty Analysis of Permeability Data	265
3.4.2	A Practical Example	266

A Appendix 279
A.1 Overview of CD Content 279
A.2 A Brief Introduction into the Computer Codes 280
a The LJUNGSKILE Program 280
b The TBCAT_S Program 283
A.3 ReadMe Text and License Agreement 294
A.3.1 Description of the Contents of the CD-ROM 294
A.3.2 Hard- and Software Requirements 295
A.3.3 Help Desk 296
A.3.4 Licence Agreement, Including Warranty and Liabilities 296
A.3.5 Final Provisions 297
