

Content

	Abbreviations and Symbols	p. XXI
1.	Basics of Optical Data Communication	p. 1
1.1	Light Propagation in Optical Fibers and Waveguides	p. 1
1.1.1	Wave and Quantum Nature of Light	p. 1
1.1.2	Electromagnetic Spectrum	p. 1
1.1.3	Refraction and Total Reflection	p. 2
1.1.4	Waveguides and Optical Fibers	p. 3
1.1.5	Singlemode and Multimode Waveguides	p. 4
1.1.6	Overview of Optical Fibers	p. 5
1.1.7	Designations of Optical Fibers	p. 7
1.2	Digital and Analog Optical Signal Transmission	p. 8
1.2.1	Digital Optical Signal Transmission	p. 10
1.2.1.1	Analog and Digital Signals	p. 10
1.2.1.2	Transmission Quality of Analog and Digital Signals	p. 13
1.2.1.3	Bit Error Probability and Error Correction	p. 15
1.2.1.4	Noise in Optical Systems	p. 17
1.2.2	Amplitude, Frequency, and Phase Modulation	p. 21
1.2.3	Modulating a Carrier Frequency	p. 22
1.2.4	Specific Transmission Methods in Optical Communications	p. 23
1.2.5	Modulating a Subcarrier	p. 25
1.3	Network Architectures	p. 26
1.3.1	Active and Passive Networks	p. 26
1.3.2	Network Structures	p. 27
1.3.3	Multiple Access Methods	p. 28
1.3.3.1	Time Division Multiplex	p. 28
1.3.3.2	Frequency Division Multiplex	p. 30
1.3.3.3	Code Division Multiplex	p. 31
1.3.3.4	Wavelength Division Multiplex	p. 31
1.3.3.5	The Special Features of Optical Multiplexing	p. 31
1.3.3.6	Bi-directional Transmission	p. 33
2.	Optical Fibers	p. 37
2.1	Fundamentals of Optical Fibers	p. 37
2.1.1	Refractive Index Profiles	p. 37
2.1.2	Numerical Aperture	p. 39
2.1.3	Ray Trajectory in Optical Fibers	p. 40
2.1.4	Modes in Optical Fibers	p. 42

2.1.4.1	The Mode Concept	p. 42
2.1.4.2	Mode Propagation in Real Fibers	p. 44
2.1.5	Parameters for Describing Real Fibers and Waveguides	p. 45
2.1.5.1	Attenuation	p. 46
2.1.5.2	Mode-Dependent Attenuation	p. 47
2.1.5.3	Mode Coupling	p. 49
2.1.5.4	Mode Conversion	p. 50
2.1.5.5	Mode Coupling Lengths	p. 52
2.1.5.6	Leaky Modes	p. 55
2.1.5.7	Dispersion in Optical Fibers	p. 55
2.1.5.8	Mode Dispersion	p. 58
2.1.5.9	Chromatic Dispersion	p. 64
2.2	Index Profiles and Types of Fibers	p. 65
2.2.1	Step Index Profile Fibers (SI)	p. 65
2.2.2	The Step Index Fiber with Reduced NA (low-NA)	p. 67
2.2.3	The Double-Step Index Optical Fiber (DSI)	p. 68
2.2.4	The Multicore Step Index Optical Fiber (MC)	p. 70
2.2.5	The Double Step Index Multicore Fiber (DSI-MC)	p. 73
2.2.6	The Graded Index Optical Fiber (GI)	p. 74
2.2.7	The Multi-Step Index Optical Fiber (MSI)	p. 75
2.2.8	The Semi-Graded Index Profile Fibers (Semi-GI)	p. 76
2.2.9	An Overview of Index Profiles	p. 77
2.3	The Development of Polymer Optical Fibers	p. 79
2.3.1	Looking back	p. 79
2.3.2	Step Index Polymer Fibers	p. 80
2.3.3	Double Step Index Profile Polymer Fibers	p. 83
2.3.4	Multi-Core Polymer Fibers	p. 85
2.3.5	Multi-Step Index Profile and Graded Index Profile Fibers	p. 87
2.4	Glass Fibers for Short-Range Data Transmission	p. 93
2.4.1	200 μm Glass Fibers with Polymer Cladding	p. 93
2.4.2	Semi-Graded Index Glass Fibers	p. 97
2.4.3	Glass Fiber Bundles	p. 98
2.4.3.1	Quartz Glass Fiber Bundles	p. 98
2.4.3.2	Glass Fiber Bundles	p. 100
2.5	Bandwidth of Optical Fibers	p. 103
2.5.1	Definition of Bandwidth	p. 103
2.5.2	Experimental Determination of Bandwidth	p. 104
2.5.3	Experimental Bandwidth Measurements	p. 107
2.5.3.1	Bandwidth of SI-POF	p. 107
2.5.3.2	Bandwidth Measurements on SI-POF	p. 112
2.5.3.3	Bandwidth Measurements on MC- and MSI-POF	p. 117
2.5.3.4	Bandwidth Measurements with GI-POF	p. 120
2.5.3.5	Bandwidth Measurements on MC-GOF and PCS	p. 122
2.5.3.6	Comparison of Bandwidth Measurements and Calculations	p. 130
2.5.4	Chromatic Dispersion in Polymer Optical Fibers	p. 133
2.5.5	Methods for Increasing Bandwidth	p. 135

2.5.6	Bit Rates and Penalty	p. 141
2.6	Bending Properties of Optical fibers	p. 143
2.6.1	Bending Losses in SI-POF	p. 144
2.6.2	Bending Losses in GI Fibers	p. 147
2.6.3	Change of Bandwidth by Bends	p. 147
2.6.4	Bends on PCS, Multicore Fibers and thin POF	p. 149
2.7	Materials used for POF	p. 155
2.7.1	PMMA	p. 155
2.7.2	POF for Higher Temperatures	p. 157
2.7.2.1	Cross-Linked PMMA	p. 158
2.7.2.2	Polycarbonate POF	p. 160
2.7.2.3	Elastomer POF	p. 162
2.7.2.4	Cyclic Polyolefines	p. 164
2.7.2.5	Comparison of High-Temperature POFs	p. 164
2.7.3	Polystyrene-Polymer Fibers	p. 166
2.7.4	Deuterated Polymers	p. 168
2.7.5	Fluorinated Polymers	p. 173
2.7.6	Overview over Polymers for POF Jackets	p. 177
2.8	Fiber and Cable Production	p. 180
2.8.1	Production Processes for POF	p. 180
2.8.2	Production of Graded Index Profiles	p. 184
2.8.2.1	Interfacial Gel Polymerization Technique	p. 184
2.8.2.2	Creating the Index Profiles by Centrifuging	p. 186
2.8.2.3	Combined Diffusion and Rotation	p. 186
2.8.2.4	Photochemical Generation of the Index Profile	p. 187
2.8.2.5	Extrusion of Many Layers	p. 187
2.8.2.6	Production of Semi-GI-PCS	p. 188
2.8.2.7	Polymerization in a Centrifuge	p. 189
2.8.2.8	Continuous Production at Chromis Fiberoptics	p. 190
2.8.2.9	GI-POF with Additional Cladding	p. 191
2.8.3	Cable Manufacturing	p. 194
2.8.3.1	Cable Construction with SI-POF Elements	p. 196
2.8.3.2	Non-Stranded SI-POF Cables	p. 197
2.8.3.3	Stranded SI-POF Cables	p. 202
2.8.3.4	Principles of Stranding	p. 204
2.8.3.5	Corrugated Micro Tube Cables	p. 210
2.9	Microstructured Fibers	p. 215
2.9.1	Kinds of Wave Guiding	p. 215
2.9.1.1	Effective Refractive Index	p. 216
2.9.1.2	Photonic Band Gaps	p. 217
2.9.1.3	Bragg Fibers	p. 219
2.9.1.4	Hole-Assisted Fibers	p. 219
2.9.2	Production Methods	p. 220
2.9.2.1	Microstructured Glass Fibers	p. 221
2.9.2.2	Microstructured Polymer Fibers (MPOF)	p. 221
2.9.2.3	End Surface Preparation	p. 223

2.9.3	Applications for Microstructured Fibers	p. 225
2.9.3.1	Dispersion Compensation	p. 225
2.9.3.2	Endlessly Singlemode	p. 225
2.9.3.3	Birefringence	p. 226
2.9.3.4	Highly Nonlinear Fibers	p. 227
2.9.3.5	Control of the Effective Area	p. 227
2.9.3.6	Filters	p. 228
2.9.3.7	Sensor Technology, Tunable Elements	p. 228
2.9.3.8	Double-Core and Multi-Core Fibers	p. 229
2.9.3.9	Imaging	p. 229
2.9.3.10	Multimode Graded Index Fibers	p. 230
3.	Passive Components for Optical Fibers	p. 233
3.1	Connection Technology for Optical Fibers	p. 233
3.1.1	Connectors for Polymer Optical Fibers	p. 234
3.1.2	Surface Preparation of POF Connectors	p. 235
3.1.2.1	POF Preparation by Cutting and Polishing	p. 237
3.1.2.2	Hot Plate Surface Preparation	p. 238
3.1.2.3	POF Press-Cut Procedure	p. 238
3.1.2.4	POF Preparation by Milling	p. 240
3.1.3	Overview of Connector Systems	p. 241
3.1.3.1	The V-Pin Connector System	p. 241
3.1.3.2	FSMA Connector	p. 244
3.1.3.3	The DNP System	p. 245
3.1.3.4	F05 and F07	p. 246
3.1.3.5	ST and SC Connectors	p. 247
3.1.3.6	Connectors for Future In-House Networks	p. 249
3.1.3.7	Connectors for Vehicle Networks	p. 250
3.1.3.8	Other Connectors	p. 252
3.1.4	Processing Tools for POF Connectors	p. 253
3.1.5	Connectors for Glass Fibers	p. 257
3.2	Basis for Calculating Connector Losses	p. 259
3.2.1	Calculation of Connector Losses with Uniform Mode Distribution	p. 259
3.2.2	Differences in Core Diameter	p. 259
3.2.3	Differences in Numerical Aperture	p. 260
3.2.4	Lateral Offset of the Fibers	p. 261
3.2.5	Losses due to Rough Surfaces	p. 262
3.2.6	Losses through Angles between the Fiber Axis	p. 263
3.2.7	Losses through Fresnel Reflection	p. 264
3.2.8	Losses through Axial Distance of the Fibers	p. 265
3.2.9	Losses due to Different Causes	p. 268
3.3	POF Couplers	p. 269
3.3.1	Construction of POF Couplers	p. 269
3.3.2	Commercial Couplers	p. 271
3.3.2.1	Polished Coupler from DieMount	p. 273
3.3.2.2	Moulded Couplers from IMM	p. 274

3.3.2.3	Waveguide Couplers from the University of Sendai	p. 275
3.4	Filters and Attenuators for POF	p. 276
3.4.1	Filters	p. 276
3.4.2	Attenuators	p. 277
3.5	Mode Mixers and Converters	p. 282
3.6	Optical Slip Rings and Rotary Optical Connectors	p. 285
3.6.1	Rotary Optical Connectors	p. 285
3.6.2	The Micro-rotation Project	p. 286
3.6.3	POF Slip Rings	p. 288
3.6.4	Prism Coupler Slip Ring	p. 290
3.6.5	The Mirror Groove Slip Ring	p. 292
4.	Active Components for Optical Systems	p. 295
4.1	Emitters and Receivers	p. 295
4.1.1	The Principle of Light Generation in Semiconductors	p. 296
4.1.2	Structuring Semiconductor Components	p. 300
4.1.3	Structures of Semiconductor Transmitters	p. 302
4.1.3.1	Luminescence Emitting Diode	p. 302
4.1.3.2	Laser and Super Luminescence Diodes	p. 302
4.1.3.3	Surface Emitting Laser	p. 304
4.1.3.4	Resonant Cavity LED	p. 305
4.1.3.5	Non Resonant Cavity LED	p. 306
4.2	Transmitting Diodes for Data Communication	p. 307
4.2.1	Red LEDs and SLEDs	p. 307
4.2.2	Red Laser Diodes	p. 309
4.2.3	Blue and Green LEDs	p. 314
4.2.4	Green Laser Diodes	p. 320
4.2.5	Vertical Laser Diodes and RC-LED	p. 321
4.2.5.1	Red RC-LED	p. 321
4.2.5.2	Red VCSELs	p. 327
4.2.5.3	VCSEL in the IR Region	p. 333
4.2.6	Non Resonant Cavity LED	p. 334
4.2.7	Pyramid LEDs	p. 336
4.3	Wavelengths for POF Sources	p. 337
4.4	Receivers	p. 338
4.4.1	Efficiency and Sensitivity	p. 339
4.4.2	Photodiode Structures	p. 340
4.4.3	Junction Capacity and Bandwidth	p. 343
4.4.4	Overview of Receivers	p. 343
4.4.5	Commercial Products	p. 344
4.4.6	Improvement in Sensitivity	p. 346
4.5	Transceivers	p. 347
4.5.1	Components before 2000	p. 347
4.5.2	Fast Ethernet Transceiver	p. 350
4.5.2.1	POF Solutions from DieMount in Wernigerode	p. 350
4.5.2.2	Optical Clamps from Ratioplast	p. 352

4.5.2.3	Transceiver Family from Avago	p. 352
4.5.2.4	Home Installation by RDM	p. 353
4.5.2.5	POF Transceivers from Infineon/Siemens	p. 353
4.5.3	Other Systems	p. 354
4.5.3.1	Comoss	p. 354
4.5.3.2	IEEE 1394, MOST and Fast Ethernet from Firecomms	p. 355
4.5.3.3	Japanese Manufacturers	p. 356
4.5.3.4	Fast Ethernet, Ethernet and Video from Luceat	p. 356
4.5.3.5	DSL Modem with POF	p. 357
5.	Planar Waveguides	p. 359
5.1	Materials for Waveguide Structures	p. 360
5.2	Production of Polymer Waveguides	p. 361
5.3	Singlemode Waveguides	p. 364
5.4	Multimode Waveguides	p. 368
5.5	Functional Components as Waveguides	p. 371
5.5.1	Thermo-Optical Switches	p. 371
5.5.2	Modulators	p. 373
5.5.3	Coupling Components	p. 373
5.5.4	Waveguide Gratings	p. 374
5.6	Waveguides as Interconnection Solutions	p. 375
5.6.1	Optical Backplane Systems from DaimlerChrysler	p. 375
5.6.2	Systems from the University of Ulm	p. 378
5.6.3	Electro-optical PCB from the University of Siegen	p. 379
5.6.4	IBM Research Center Zurich /ETH Zurich	p. 380
5.6.5	Results of the NeGIT Project	p. 382
6.	System Design	p. 387
6.1	Link Power Budget of Optical Transmission Systems	p. 387
6.1.1	Changes of the Transmitted Power	p. 387
6.1.2	Sensitivity of the Receiver	p. 388
6.1.3	Attenuation of the Fiber Link	p. 391
6.1.3.1	Coupling Losses from the Transmitter into the POF	p. 391
6.1.3.2	Losses in the Fiber Link	p. 393
6.1.3.3	Connector Losses	p. 394
6.1.3.4	Passive Component Losses	p. 395
6.1.3.5	Coupling Losses between POF and Receiver	p. 397
6.1.4	The Link Power Budget of the ATM Forum Specification	p. 398
6.1.4.1	Loss Analysis by the ATM Forum	p. 398
6.1.4.2	Changes in the Transmission Power	p. 398
6.1.4.3	Attenuation of the Polymer Optical Fiber Link	p. 400
6.1.4.4	Connector Losses	p. 407
6.1.4.5	Additional Losses through External Influences	p. 408
6.1.5	Choice of Wavelength for POF Systems	p. 410
6.1.5.1	LED as Transmitters for POF Systems	p. 411
6.1.5.2	Selection of the Type of Source	p. 418

6.1.5.3	Typical Losses for LED Sources	p. 419
6.1.5.4	Lasers for POF Systems	p. 421
6.1.5.5	VCSEL and RC-LED for POF Systems	p. 422
6.1.6	Definition of new LED Parameters	p. 423
6.2	Examples of Link Power Budgets	p. 427
6.2.1	ATM Forum Specification	p. 427
6.2.2	IEEE1394b	p. 428
6.2.3	D2B and MOST	p. 429
6.2.4	ISDN over POF	p. 431
6.2.5	Link Power Budget for Bi-Directional Transmission	p. 431
6.2.5.1	Asymmetrical Couplers	p. 432
6.2.5.2	Symmetrical Couplers	p. 432
6.3	Overview of POF Systems	p. 434
6.3.1	Step Index Profile POF Systems at 650 nm	p. 435
6.3.1.1	The first SI POF Systems	p. 435
6.3.1.2	SI POF Systems with over 500 Mbit/s	p. 440
6.3.1.3	SI-POF Systems with more than 500 Mbit/s	p. 444
6.3.1.4	SI-POF Systems at the POF-AC Nürnberg	p. 451
6.3.2	Systems with PMMA SI POF at Wavelengths below 600 nm	p. 458
6.3.2.1	Systems with $A_{III} B_V$ Semiconductor LEDs	p. 458
6.3.2.2	Systems with GaN LEDs	p. 459
6.3.2.3	Commercial Developments	p. 466
6.3.2.4	POF-AC Systems	p. 469
6.3.3	Systems with SI-POF at Wavelengths in the Near Infrared Range	p. 472
6.3.3.1	PMMA Fiber Systems for Infrared	p. 472
6.3.3.2	PC Fiber Systems in Infrared	p. 475
6.3.3.3	System Experiments at the POF-AC	p. 475
6.3.4	Systems with PMMA GI-POF, MSI-POF and MC-POF	p. 479
6.3.4.1	PMMA GI-POF System Experiments before 2000	p. 480
6.3.4.2	Recent PMMA GI-POF Systems	p. 486
6.3.4.3	System Experiments by Telekom and POF-AC	p. 487
6.3.5	Systems with Fluorinated POF	p. 491
6.3.5.1	First Systems with PF-GI-POF	p. 492
6.3.5.2	Experiments at the Technical University of Eindhoven	p. 495
6.3.5.3	Data Rates over 5 Gbit/s with GI-POF	p. 500
6.3.6	POF Multiplex	p. 507
6.3.6.1	Wavelength Multiplex Systems with PMMA POF	p. 508
6.3.6.2	Wavelength Multiplex Systems with PF-GI-POF	p. 514
6.3.6.3	Bi-Directional Systems with POF	p. 519
6.3.7	Special Systems, for Example, with Analog Signals	p. 528
6.3.7.1	Video Transmission with POF	p. 528
6.3.7.2	Transmission of Analog Modulated Digital Signals	p. 533
6.3.7.3	Radio over Fiber	p. 540
6.3.7.4	Mode Multiplex	p. 541
6.3.7.5	Fiber Ribbon Systems	p. 544
6.4	Other Optical Transmission Systems with Fibers	p. 546

6.4.1	Data Transmission on High-Temperature POF	p. 546
6.4.2	Multi-Parallel POF Connections	p. 548
6.4.3	Systems with 200 μm PCS and Semi-GI-PCS	p. 550
6.4.4	Systems with Glass Fiber Bundles	p. 555
6.5	Overview and Comparison of Multiplex Techniques	p. 557
7.	Standards	p. 561
7.1	Standards for Polymer and Glass Fibers	p. 562
7.1.1	Polymer Fibers	p. 562
7.1.2	Plastic Clad Glass Fibers	p. 564
7.1.3	Fibers in General	p. 565
7.2	Application Standards	p. 566
7.2.1	ATM Forum (Asynchronous Transfer Mode)	p. 566
7.2.2	IEEE 1394b	p. 569
7.2.3	SERCOS (Serial Realtime COmmunication System)	p. 572
7.2.4	Profibus	p. 573
7.2.5	INTERBUS	p. 574
7.2.6	Industrial Ethernet over POF	p. 575
7.2.7	D2B (Domestic Digital Bus)	p. 578
7.2.8	MOST (Media Oriented System Transport)	p. 580
7.2.9	IDB 1394	p. 582
7.2.10	EN 50173	p. 583
7.3	Standards for Measurement Techniques	p. 587
7.3.1	The VDE / VDI Guideline 5570	p. 588
8.	Application of Polymer Optical and Glass Fibers	p. 593
8.1	Data Transmission with POF	p. 593
8.1.1	POF in the Automotive Field	p. 595
8.1.1.1	D2B	p. 598
8.1.1.2	MOST	p. 599
8.1.1.3	Byteflight	p. 603
8.1.1.4	IDB 1394	p. 604
8.1.1.5	MOST with PCS	p. 605
8.1.1.6	Outlook for the Automobile Networks	p. 609
8.1.1.7	Corrugated Micro Tube POF Cable in the Car	p. 611
8.1.1.8	Optical Camera Links for Trucks	p. 611
8.1.2	Data Networks in Apartments and Buildings	p. 614
8.1.2.1	Use of POF in LAN Applications	p. 615
8.1.2.2	Use of POF in Private Networks	p. 616
8.1.2.3	POF and the Development of Broadband Networks	p. 623
8.1.2.4	POF and Wireless	p. 626
8.1.2.5	POF Topologies	p. 629
8.1.3	Interconnection Systems with POF	p. 631
8.1.3.1	Parallel Data Transmission with Glass Fibers	p. 631
8.1.3.2	Parallel Data Transmission with POF	p. 631
8.2	POF in Lighting Technology	p. 634

8.2.1	POF for Light Guiding	p. 634
8.2.1.1	POF for Advertising Pillar Illumination	p. 636
8.2.1.2	POF Starry Ceiling Lights	p. 637
8.2.2	Side-Lighting Fibers	p. 639
8.3	POF in Sensor Technology	p. 643
8.3.1	Remote Powered Sensors	p. 644
8.3.2	Transmission and Reflection Sensors	p. 645
8.3.2.1	POF as Distance Sensor	p. 645
8.3.2.2	POF Sensors for Concentration	p. 647
8.3.2.3	Deformation and Pressure Sensors	p. 647
8.3.3	Sensors with Fibers as Sensitive Elements	p. 649
8.3.3.1	The POF Scale	p. 649
8.3.3.2	POF Expansion Sensor	p. 650
8.3.4	Sensors with Surface-Modified Fibers	p. 652
8.3.4.1	Bending Sensors with Notched Fibers	p. 652
8.3.4.2	POF Evanescence Field Sensors	p. 654
8.3.4.3	Fill Level Sensors	p. 656
8.3.4.4	POF Bragg Grating Sensors	p. 657
8.3.5	Sensors for Chemical Materials	p. 658
8.3.5.1	Humidity	p. 659
8.3.5.2	Biosensors	p. 660
8.3.5.3	Liquids	p. 661
8.3.5.4	Corrosion	p. 662
8.3.6	Glass Fiber Sensors	p. 662
9.	Optical Measuring Methods	p. 665
9.1	Overview	p. 665
9.2	Measuring Power	p. 666
9.3	Dependence on the Launch Conditions	p. 670
9.4	Measurement of the Optical Parameters	p. 674
9.4.1	Near Field	p. 675
9.4.2	Far Field	p. 679
9.4.3	Inverse Far Field	p. 684
9.4.4	Index Profile	p. 687
9.4.5	Attenuation	p. 688
9.4.5.1	Insertion and Substitution Methods	p. 688
9.4.5.2	Cut-Back Method	p. 690
9.4.5.3	Measuring Attenuation for Discrete Wavelengths	p. 690
9.4.5.4	Measuring Attenuation over a Larger Spectral Range	p. 692
9.4.5.5	Results of Measurements	p. 698
9.4.6	Optical Backscattering Method	p. 704
9.4.6.1	Principle of the ODTR	p. 704
9.4.6.2	Improvement in the Resolution by Deconvolution	p. 708
9.4.6.3	Commercial POF OTDR	p. 709
9.4.6.4	Experimental POF OTDR	p. 711
9.4.6.5	Measurement of the Connector Attenuation	p. 713

9.4.6.6	Bandwidth Measurements with OTDR	p. 714
9.4.7	Dispersion	p. 716
9.4.7.1	Time Based Measurement	p. 716
9.4.7.2	Frequency Based Measurement	p. 718
9.5	Connector Measurements	p. 719
9.6	The Reliability of POF	p. 722
9.6.1	Environmental Influences on Polymer Optical Fibers	p. 722
9.6.2	The Effect of Environmental Influences on Optical Transmission	p. 724
9.6.2.1	Attenuation Factors of Polymer Optical Fibers	p. 724
9.6.2.2	Detection by Measuring Optical Transmission	p. 725
9.6.2.3	Detection by Measuring Backscattering	p. 727
9.7	Investigation of Reliability under Various Environmental Influences	p. 729
9.7.1	Mechanical Stress	p. 729
9.7.1.1	Repeated Bending	p. 729
9.7.1.2	Flexing	p. 733
9.7.1.3	Torsion	p. 735
9.7.1.4	Tensile Strength	p. 738
9.7.1.5	Impact Strength	p. 741
9.7.1.6	Crushing Strength	p. 745
9.7.1.7	Vibration	p. 746
9.7.2	Stress due to Change in Climatic Conditions	p. 747
9.7.3	Aging due to the Stress of High Temperature and Humidity	p. 749
9.7.4	Resistance to Chemicals	p. 756
9.7.5	Stress Caused by Ultraviolet and High-Energy Radiation	p. 759
9.8	Standards and Specifications	p. 760
10.	Simulation of Optical Waveguides	p. 763
10.1	Modeling of Polymer Optical Fibers	p. 763
10.1.1	Types of Fibers	p. 765
10.1.2	Modeling Approaches	p. 766
10.1.2.1	Approaches with Wave Theory	p. 766
10.1.2.2	Ray Tracing Procedure	p. 767
10.1.3	Wave Theory Description	p. 768
10.1.3.1	WKB Method	p. 768
10.1.3.2	Step Index Profile Fiber	p. 769
10.1.3.3	Graded Index Fibers with Power-Law Profile	p. 770
10.1.3.4	Multi Step Index Fibers	p. 771
10.1.3.5	Determining the Mode Power Distribution	p. 772
10.1.3.6	Calculating the Transmission Function and the Output Signal	p. 772
10.1.4	Ray-Tracing	p. 773
10.1.4.1	Step Index Fibers	p. 774
10.1.4.2	Graded Index Fibers	p. 774
10.1.4.3	Multi Step Index Fibers	p. 775
10.1.4.4	Bends	p. 776
10.1.5	Mode-Dependent Attenuation	p. 776
10.1.5.1	Additional Path-Dependent Attenuation of Higher Modes	p. 777

10.1.5.2 Additional Losses of Higher Modes through Loss-Encumbered Reflections	p. 778
10.1.5.3 Goos-Hänchen Effect	p. 779
10.1.6 Mode Mixing	p. 780
10.1.6.1 Coupled-Mode Theory	p. 781
10.1.6.2 Diffusion Model	p. 783
10.1.6.3 Application with the Aid of the Split-Step Algorithm	p. 784
10.1.6.4 Phenomenological Approach	p. 785
10.2 Examples for Simulation Results	p. 786
10.2.1 Calculating the Bandwidth of SI Fibers	p. 786
10.2.2 A Linear POF Propagation Model	p. 790
10.3 Measurement and Simulation of Bandwidth of PF-GI-POF	p. 793
10.4 Simulation of Optical Receivers and Large Area Photodiodes	p. 797
11. POF Clubs	p. 803
11.1 The Japanese POF Consortium	p. 803
11.2 HSPN and PAVNET	p. 804
